AMCA Meeting Report: Trustee Winger reported the following from the AMCA meeting.

Zika is still a big unknown on how it affects pregnant mothers & infants. There isn't a lot of hard data yet. The EIPHD has tested a few and so far they have been negative. Only 18% of Zika infections demonstrate symptoms. Zika symptoms include conjunctivitis while Dengue and West Nile don't.

There have been 25,000 to 50,000 deaths from Dengue so far.

The tire drive will be coming up in May

We should strive for increased public outreach in April and May.
